EDUCATION

The University of Texas at Dallas, Richardson, TX

Expected Dec 2026

Bachelor of Science, Computer Science

- Coursework: Database Systems, Operating Systems, Algorithms, Automata Theory, Computer Graphics

SKILLS

Programming Languages: Java, Python, JavaScript, React, HTML, CSS, C++, C#, Unity

Automation & Testing: Workflow automation, process automation, Python scripting, REST APIs, RPA concepts, validation and troubleshooting

Frameworks & Tools: SQL, MySQL, MongoDB, PHP, Node.js, Git/GitHub, VS Code, IntelliJ IDEA, CMS platforms

Systems & Software: Full-stack development, responsive web design, Ubuntu Linux, server config & deployment, API integration, Microsoft Office apps, Firebase, Express.js, PyCharm, Tailwind CSS, Google Workspace, Excel, Google Sheets, Apollo Client

Collaboration: Cross-functional team collaboration, stakeholder communication, group/Agile project workflows

Languages: English, Arabic

WORK EXPERIENCE

Automation Engineer & Software Developer Intern | Auto One Motors LLC

May 2026 – August 2026

- Built and deployed workflow automations for internal business operations and tracking systems, reducing repetitive manual data entry and creating more consistent follow-up processes.
- Worked directly with staff across departments to map business workflows, communicating technical concepts in plain terms and translating requirements into working solutions.
- Maintained internal tools after launch, coordinating with the wider team to troubleshoot issues and keep everyone aligned on workflow status and next actions.

Software Engineer/Developer | Marketplace Wholesale LLC

Aug 2024 – Aug 2026

- Built and maintained a full-stack order and inventory workflow tool, working closely with operations staff to reduce manual processing errors and improve inventory visibility.
- Developed internal web applications, CMS-driven sites, and automation solutions, coordinating across front-end, back-end, and business-process needs.
- Handled deployments, troubleshooting, Git-based development, and Ubuntu/server administration while supporting live business systems used by the wider team.

Full Stack Developer | Salam Foundation Inc.

Jan 2025 – May 2026

- Developed and deployed the organization's production website and CMS, working closely with staff so non-technical team members could manage admissions, events, announcements, and content independently.
- Automated administrative workflows and communicated changes clearly to staff, maintaining production functionality and resolving issues affecting routine processes.
- Gathered requirements directly from staff through ongoing conversations, validated changes before deployment, and supported the team through handoff and continued use of technical tools.

PROJECTS

Full-Stack E-Commerce Platform — Rawh Wa Rayhan

2026

- Built and deployed a full-stack fragrance storefront with product listings, cart state management, checkout flow, and CMS-based product/content updates.
- Designed the site so non-technical users could manage products, pricing, and content without editing source code.

Business & Organization Websites — 4 Live Deployments

2024 – 2026

- Built and launched production websites for a private school, restaurant brand, and local business organizations, with responsive layouts and CMS-based content management.
- Managed deployment, production updates, troubleshooting, and ongoing client-facing technical changes.

Database Systems Team Project — Team Lead | UTD

- Led a student team through the design and implementation of a relational database system, coordinating schema design, normalization, and query development across group members.

Minecraft Server Plugin Suite + Ubuntu Server Administration

2024

- Created multiple custom Minecraft server plugins in Java, including automated/integrated command systems, a custom skills plugin, and other gameplay features built with object-oriented and event-driven design.
- Set up, ran, and managed multiple live multiplayer servers on Ubuntu Linux — handling SSH access, Java runtime configuration, cron-based automation, and port/network management.
